- d. People want to drink more water.

5. Which is NOT mentioned in the book about how to use less water?

- a. Taking shorter showers
- b. Turning off the water while brushing your teeth
- c. Collecting water in a rain barrel
- d. Growing less food on farms

## Summary

Fill in the blanks with the words.

crops	deforestation	barrels	weather	shortage
-------	---------------	---------	---------	----------

A drought happens when there is not enough rain for a long time. It is an extreme water shortage that hurts plants and animals. It can mean humans have less water. It can also make their water taste bad. The weather and environment cause droughts. Air flow can keep rainclouds away. Hot weather can make rain that falls disappear. Humans can make droughts worse. When we use too much water, droughts happen more easily. This happened in the 1930s Dust Bowl. People in America planted too many crops. This made the drought worse. The loose soil became dust in the air. Humans are also the main cause of deforestation. This could create another Dust Bowl. Droughts can also cause other problems, such as fires. There are things we can do to help. We can use less water. We can also save rain in barrels and use it to water plants.
