Summary

Fill in the blanks with the words.

spread	legs	queen	hives
--------	------	-------	-------

There are bees and flowers in the garden. A bee has six 1) legs and two pairs of wings. It has a stinger, too. It will hurt if it stings you! Bees get nectar and pollen from flowers. As they move from flower to flower, they 2) spread pollen. This helps flowers grow. Bees move their wings fast to fly. Their wings make a sound. Bees live in 3) hives. Hives have many rooms. There are many worker bees in a hive. The 4) queen bee is the only bee that can lay eggs. The worker bees do everything else. They clean the hives. They get food and make honey. They take care of the babies, too.
