Summary

Fill in the blanks with the words.

damage	tornadoes	scientists	tropical
--------	-----------	------------	----------

People love to visit the ocean during the summer. Sometimes, there is a storm. The storm could become a hurricane. Hurricanes are 1) tropical storms that usually form over water. The winds can be strong enough to destroy buildings. They can also cause 2) tornadoes. Hurricanes cause storm surges, too. Sometimes, they do not cause 3) damage. However, some hurricanes have destroyed cities and killed many people. Scientists give each hurricane a name. They can often guess where a storm will travel. It's harder to guess the strength of the storm. 4) Scientists study hurricanes to help save lives. Hurricane hunters fly into hurricanes. It is a very dangerous job. People must be prepared for hurricanes if they live near the ocean. They should keep food and water in their houses. They should stay inside until the storm has passed. Hurricanes can be dangerous, but you do not need to fear them.
