- a. They are long.
- b. They have wheels.
- c. They use hot water to move.
- d. They can go under water.

Summary

Fill in the blanks with the words.

submarines	steamboats	rafts	paddles
------------	------------	-------	---------

People use ships and boats to stay in the water for a long time. Ships can carry heavy things. Boats are smaller than ships. They move in different ways. Sailboats use the wind to move. 1) Rafts are made from wood. People can sit or stand on them. Long poles can be used to help rafts move. Canoes need 2) paddles to move. They are long boats, so more than one person can fit in them. 3) Steamboats use very hot water to move. Some steamboats have wheels that push them through the water. Cruise ships are very big. 4) Submarines are different from other boats. They can go under water. There are many kinds of boats and ships we can use on the water.
