## Summary

Fill in the blanks with the words.

dinosaurs	antennae	poisons	insects	thorax
-----------	----------	---------	---------	--------

If you leave food on the ground, you might get cockroaches. They are insects that live all over the world. They have six legs and three body parts: the head, the thorax, and the abdomen. They are flat and can get into small places. They can also walk on walls. They use their antennae to smell and feel. There are over 3,500 species of cockroaches in the world. They like to live in groups. They lay between twenty and fifty eggs at a time. Cockroaches have been on earth since the time of the dinosaurs. They are very strong animals that are hard to kill. Many people don't like them. Other people keep them as pets. Some people even eat them. People who don't like them try to kill them. They use poisons. However, this can harm people and pets. It is best to just keep your house clean.
