Summary

Fill in the blanks with the words.

brain	temperature	taste	noisy
-------	-------------	-------	-------

You use your senses to see, smell, hear, feel, and taste. You use your mouth to 1) taste. Your tongue can tell if something is sweet or not. You use your eyes to see. Light comes into your eyes and hits small cells. The cells send a picture to your 2) brain. That is how you know what you see. You use your nose to smell. Air goes into your nose and hits tiny cells. Your brain tells you what you smell. You use your ears to hear. Sound waves go into your ears. You can hear 3) noisy things and quiet things. You use your hands, skin, and mouth to feel. Your sense of 4) temperature tells you if food is hot or cold. You feel pain when you are hurt. Your senses help you learn about the world.
